

WEEK 5- IA2- CLIENT INTERVIEW EVIDENCE AND REQUIREMENT TRANSFORMATION MEMO

Course code : DCIT 208

Assignment number : 2

Full name : KWASHI ELORM FREMA

Student ID : 22397307

Team name : seg26-33-merakiartsafrica

Project title : CLIENT INTERVIEW EVIDENCE AND REQUIREMENT TRANSFORMATION MEMO

Team repository URL : <https://github.com/Dept-of-Comp-Sci-University-of-Ghana/dcit208-client-project-2026-team-engineering-repository-seg26-33-merakiartsafrica.git>

Individual portfolio repository URL : <https://github.com/Elorm07/dcit208-portfolio.git>

AI disclosure statement : I did not use AI assistance. I understand that I must be able to explain and defend every part of this submission.

JULY 3, 2026

4. Detailed task instructions

A. 10-12 client/user discovery questions before the interview or observation

- Can you describe your business or project in simple terms?
- What is the main purpose of the website?
- What message should people get when they first visit?
- What should they be able to do or learn from the site?
- What pages do you want on the website? (Home, About, Services, Gallery, Contact, etc.)
- Should users be able to send messages or inquiries through the site?
- Do you have any example websites you like?
- What kind of style do you prefer: modern, simple, creative, or corporate?
- Any colors or mood you want the site to reflect?
- Do you already have your logo and images?
- Will you provide the text content, or should we help structure it?

B. MEETING SUMMARY

Time: Tuesday, June 23, 2026, 2:09:49 PM

The meeting established a collaborative framework between Meraki Arts Africa Ltd and a 6-member student team from the University of Ghana to build the organization's new website.

Key Takeaways:

- The Partnership Philosophy: Meraki's leadership expressed a strong interest in partnering with and mentoring younger technical talent.
- Development Methodology: The project will follow a structured, Agile-inspired project management approach. The students will map out features using a visual backlog, build mockups first, and run 1-week sprint review cycles to ensure consistent alignment.
- Technical Pipeline: The student team plans to utilize Figma/Google Slides for initial UI/UX interactive wireframing, GitHub for collaborative code repository management, and will deploy to a cloud staging environment for weekly reviews.
- Infrastructure Asset Check: Meraki's leadership noted that the organization likely already owns the domain name merakiartsafrica.com (historically tied to internal email setups), which will be verified for deployment.

Project Directory & Roles

Meraki Arts Africa Leadership Team

- Elom Anang: Chief Executive Officer (CEO) / Acting Product Owner
- Aseda Otabil: Head of Human Resources (HR)
- Francis: Operations Manager / Primary Liaison

C. 1. Functional Requirement = The system shall provide an About Us page, Gallery page, contact page, Events page, and Donations page so that users can learn about the organization, view its work, contact the team, register for events, and make donations.

2. Non-Functional Requirement = The website shall be fully responsive across desktops, tablets, and mobile devices and shall support multiple users accessing the website simultaneously without significant performance degradation.

3. User Story = As a visitor, I want to learn about the Meraki Arts Africa team, browse their gallery, and contact the organization so that I can understand their work and easily get in touch with them.

4. 5 Acceptance Criteria

- The website includes an About Us page that introduces the organization's team and mission.
- The website includes a Gallery page displaying photos and videos of projects and events.
- The website includes an Events page where visitors can view upcoming events.
- The website includes a Contact page with a functional contact form that sends messages to the organization.
- The website includes a Donations page that allows visitors to view donation information or make donations securely.

D. Reflection

Before I met the client, I thought that designing a website was mostly about creating visually appealing pages that meet the requested features. I even thought that once the client has provided the list of pages that they wanted such as About Us, Gallery, Contact, and Events, the project would focus more on designing and implementing the other pages. However, after my

meeting with the Meraki Arts Africa representatives, my perception of software development changed.

During the meeting, I found out that projects that aim to succeed cannot do so without the client and the development team maintaining a continuous communication and collaboration. The client didn't just want to hand over the list of requirements at one time. They were interested in being involved at every stage of the project by reviewing the mockups, attending weekly sprint review meetings, and giving feedback regularly. This helped me realize how important are the Agile principles and how the product has to be adaptable for new ideas or requirements.

This is one of the beliefs that I had that turned out to be untrue: I thought that the project would only focus on producing an attractive website. Visual design is one aspect of the overall package but in fact, getting to know the client, users, and understanding the organizational mission is another very essential part. The conversation brought up project management via GitHub, UI/UX prototyping with Figma, and deployment planning as other critical elements. I was also made to understand that technical things like verifying ownership of the organization's domain name and deployment environment planning are integral to the development process.

One thing that the meeting made clear to me is that software development is not just about writing code or designing the user interfaces. A piece of software is the result of a team effort which involves good communication, thorough planning, and ongoing feedback so that the end product successfully fulfills the client's requirements and enough to support the organization's goals.

10. Anti-AI and viva verification .

- Which exact client statement produced your requirement? .

Elom Anang: Chief Executive Officer (CEO) / Acting Product Owner

Aseda Otobil: Head of Human Resources (HR)

Francis: Operations Manager / Primary Liaison

- How do you know this is a requirement and not just a wish? Apart from the interview we were given additional pdfs and word documents that had specific instructions on what they wanted.

- Which acceptance criterion would you test first? . The user being able to contact the Maraki Arts Team via the website
- What client information did you avoid sharing with AI?. Their contact numbers .
